Charles Darwin as Geologist: The Rede Lecture, Given at the Darwin Centennial Commemoration on 24 June 1909

By Archibald Geikie

Cambridge University Press. Paperback. Book Condition: New. Paperback. 100 pages. Dimensions: 8.3in. x 5.5in. x 0.4in. During his famous Beagle voyage, Darwin collected rocks, fossils and other geological specimens. No previous geologist had amassed such a detailed set of data. He identified raised beaches and remains of marine organisms high above the sea, understanding their significance as evidence of the uprising of landmasses. He also witnessed an earthquake and volcanic eruptions, concluding that both are related to movements of molten rock deep in the Earth. In this 1909 lecture, Sir Archibald Geikie, then President of the Royal Society, outlines Darwins geological findings and explains how these underpinned his developing ideas. We learn of Darwins theory of coral reef formation, and his fascination with the activities of earthworms. Finally the lecture considers the importance of Darwins geological studies in formulating his theory of evolution by natural selection, leading to his masterpiece On the Origin of Species. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
