Forgotten Books, United States, 2016. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.Excerpt from The Science of Human Behavior: Biological and Psychological Foundations The study of human phenomena must be carried on largely through the psychological and social sciences. Much of the writing in these sciences still consists of vague generalizations which have not been subjected to the test of being applied to a large number of data. What is needed above all is to carry much further the painstaking labor of accumulating a large mass of facts from which generalizations can be safely deduced. In other words, these sciences must get down to concrete realities more than they have in the past if they are to develop on a stable basis. It is the function of every science, on the one hand, to reduce as far as possible the phenomena with which it deals to the terms of the science upon which it is based, and, on the other hand, to describe the peculiar characteristics of these phenomena which distinguish them from the phenomena out of which they have evolved and which make them a fit subject for treatment by a distinct science. Thus psychical and social phenomena should be reduced as far as possible to biological terms, just as vital phenomena should be reduced as far as possible to chemical and physical terms. On the other hand, the peculiar characteristics of psychical and social phenomena should be described, just as the peculiar characteristics of vital phenomena should be described.
