

Individual Differences Research

By Elmechta Lamia

LAP Lambert Academic Publishing, United States, 2014. Paperback. Book Condition: New. 220 x 150 mm. Language: English . Brand New Book ***** Print on Demand *****. This work aims at investigating the relationship between memory and intelligence in first year students of English at the University of Constantine. For this purpose, we have hypothesized that those who possess higher memory abilities perform better in intelligence tests than less able ones. To test our hypothesis, we have taken a sample of 40 students from the population of first year, and designed two tests, one for memory and the other for intelligence. Both tests have been given in the English language. Intelligence test has measured chiefly reasoning, problem solving and language aptitude, while memory test has assessed simple storage capacity (mechanical recall) and active memory capacity (processing and recall). The data derived from the examination have yielded significant results, mainly between working memory and intelligence. These results could offer some help to teachers about the role of individual differences in memory capacities and their impact on learning, which is an aspect of intelligence.

Reviews

This publication is amazing. It is definitely basic but shocks in the fifty percent of your publication. You wont feel monotony at anytime of your own time (that's what catalogues are for concerning if you question me).

-- Prof. Kirk Cruickshank DDS

This kind of book is every little thing and taught me to looking ahead of time and a lot more. I am quite late in start reading this one, but better then never. I found out this book from my dad and i encouraged this pdf to find out.
